Menus that will drop down and allow the user to select objects and their properties.
e.g. Planets will contain 8 planets, with properties such as orbit, size, and distance that a user can select.

The property values will be displayed below the menu.

If the user wants to learn more about a particular value such as "perihelion," or "AU," they can click on them and explanation will appear below the property window.

Image of selected object will be displayed with a description of the image above.

Noumenal Sky

Image of the selected object is displayed above the menu.

Menus that will drop down and allow the user to select objects and their properties. e.g. Planets will contain 8 planets, with properties such as orbit, size, and distance that a user can select.

| Planets | Jupiter | Orbit |

The property values will be displayed below the menu.

Perihelion .....AU

Aphelion ....AU

Mean Distance ....AU

Eccentricity ......

Clicking on the menu will display a list
which a user can select from.

The first column will contain Planets,
Dwarf Planets, Moons, and Other.

The second column will display different
objects depending on what the user
selected in the first column.

The third column will contain some
astrophysics properties that the user
can view and learn about.

Noumenal Sky

Planets	Jupiter	Orbit
Planets	Mercury	About
	Venus	
	Earth	Distance
Dwarf Planets	Mars	
	Jupiter	Orbit
Moons	Saturn	
	Uranus	Satellites
Other	Neptune	
		Size

If the user wants to learn more about a particular value such as "perihelion," or "AU," they can click on them and a modal window will be displayed with an explanation of what that property is.
